The most beautiful way to say welcome

**Maximum design appeal –
minimum canopy height: Revo.PRIME**

Sophisticated design for impressive entrances

The entrance area is the showpiece of a building. The first impression counts, in particular for hotels and public buildings.

Architects are faced with the challenge of combining impressive design and technical aspects in a harmonious way. In such applications, our Revo.PRIME revolving door offers architects a way to effortlessly combine high expectations for design, technology, energy efficiency, and ease of access.

Minimum canopy height

The especially low canopy height of just 75 mm allows for all new design possibilities.

Advanced drive

The brushless motor gear unit and 1,000 Nm torque deliver a powerful, yet energy-efficient drive; and high ease of access.

Narrowest profile systems

The narrow profile systems at just 60 mm ensure maximum transparency and create a true wow effect.

Low consumption

The reduced power consumption lowers energy consumption of the revolving door by 30 percent. In addition, revolving doors improve energy efficiency in buildings.

Outstanding design for more energy efficiency

For more free space, transparency, and an open airy feeling: The Revo.PRIME revolving door offers a minimum canopy height and narrowest profile systems to meet the most discerning design demands. At the same time, the advanced drive ensures high ease of access with low energy consumption.

Award-winning: The sophisticated design of the Revo.PRIME has already won over the juries for the Red Dot 2022 and the German Design Award 2022.
