GEZE F 1200+: safe and easy operation of large windows

GEZE, the innovative window, door and safety specialist, now offers a special drive for opening and locking large, room-height windows: GEZE F 1200+. This drive is designed for turn-and-tilt windows with a leaf weight of up to 200 kilograms. A powerful yet very quiet motor is able to bring the window to the desired tilt position and also release the locking mechanism to bring the window manually into the turn position. The drive can easily be retro-fitted, and integrated into automated control concepts via the GEZE IQ box KNX.

Easy operation of windows at room height

Today, floor-to-ceiling windows or windows which dominate façades have become standard, especially in high-grade offices or living spaces. But apart from their aesthetic aspect, large windows, which can be opened, also improve room quality. Users appreciate having light, and the natural ventilation. Thanks to the GEZE F 1200+, GEZE now presents a drive with which large turn-and-tilt windows can easily be opened automatically or manually. The intuitive operation concept makes it possible for users, such as hotel guests or hospital visitors, to handle it safely, even without previous training.

Maximum comfort and safety

The GEZE F 1200+ drive has been designed for turn-and-tilt windows with GEZE F 1200 fitting and a weight of up to 200 kg per leaf. The drive opens and closes the leaf in a tilt position for natural ventilation, while also assuming the locking function. The window can be completely opened for airing the room, thanks to the manual turn function. Manual opening in the turn position is also an advantage for maintenance works, and when cleaning the window glass. A lock prevents unauthorised people from opening the leaf in the turn position.

PRESS RELEASE

dated 13.01.2021

Individual solution or part of a concept for automated natural ventilation

2 | 2

The GEZE F 1200+ drive can be networked via the GEZE IQ box KNX. Furthermore, windows can be connected to a higher-ranking building management system via GEZE Cockpit and be activated in this way. At the same time, GEZE F 1200+ enables a user in the room to activate the windows directly via an integrated control panel on the drive. During manual operation, the control panel is activated via a proximity sensor. The user can operate the drive intuitively via a keyboard. Thanks to visual status and safety notifications, the integrated LED display guarantees enhanced product safety.
