Press kit: GEZE exhibition highlights at Fensterbau Frontale

From 19 to 22 March 2024, GEZE will be exhibiting its innovative solutions and services at Fensterbau Frontale, under the motto of “Smart façades for sustainable buildings”, and presenting the company as an experienced, competent partner. We have assembled key content on GEZE's exhibition presence for you in a digital press kit. You will find press releases and high-resolution visual materials for the following products:

- **NETWORKING SOLUTION**

- **myGEZE Control networking solution**

- The modular platform designed for integrating door, window and safety technology works with the open BACnet standard. It allows for automated processes in companies, central monitoring for more safety and energy-optimised operation. The platform also facilitates highly efficient integration into building management, physical security management and CAFM systems from many different manufacturers. If integration is not needed, then the new and comprehensive visualisation system myGEZE Visu is the right choice. With it, operators can make data and information from GEZE's entire door, window and safety technology portfolio usable for their needs.

- **WINDOW TECHNOLOGY**

- **F 1200+ window drive**

- GEZE developed the F 1200+ as a proprietary window drive that can easily move turn-and-tilt and tilt windows up to 3.50 meters in height, 2.40 meters in leaf width and with a leaf weight of 200 kilograms. A powerful, yet very quiet drive can move the window to the desired tilt position. After unlocking the window, users can also move it manually into a turning position using the drive operating element.

- **REVOLVING DOORS**

- **Revo.PRIME revolving door system**

- Revo.PRIME promises maximum transparency and modern accents in hotel

entrance areas, offices and administrative buildings. This design-oriented product is characterised by its particularly low canopy height and narrow profile systems, as well as its improved operating performance. A brushless DC motor (BLDC) with 1,000 Nm torque ensures better access convenience, and the revolving door also offers a significant reduction in energy consumption.
